

Securis, an international information assurance company headquartered in Canada, provides clients with security and risk management consulting services, managed security services, security solution integration, and education services. Securis also maintains an active research and development portfolio, working collaboratively with organizations across Canada and internationally. Through our commitment to quality, research, and knowledge transfer, Securis delivers innovative and comprehensive information assurance services and solutions that provide value to our clients.

A challenging opportunity is currently available at Securis:

Senior Information Security Consultant (#2011-0006)

Summary

As part of the Professional Services team, the Senior Information Security Consultant plans, organizes, and conducts information security consulting assignments with our customers. The Senior Information Security Consultant assists clients with the development of Information Security strategies, policies, and architectures; performs assessment of the client organization's information security posture, including processes, policies, and technical assessment; and provides general information security advice and guidance. Responsibilities include collaboration with other Securis staff to share knowledge and practices, to improve organizational practices.

Key Responsibilities

- Plan and conduct information security consulting engagements, including technical assessment, strategy development, and security architecture, as well as policy and process analysis
- Work directly with customers, both on development of work plans and execution of consulting engagements
- Engage clients in interviews, surveys, and data collection to perform assessments
- Develop deliverables in accordance with work plans developed collaboratively with clients
- Develop well-written, well-structured, accessible, and useable deliverables, for both client and internal audiences
- Contribute to the ongoing development of knowledge and practices within Securis, to enhance our services available to our customers
- Participate in professional development activities, focused on information security, including the pursuit of designations such as CISSP, CCNA, CCNP, CCDA, CISM, and others
- Participate in pre-sales discussion with clients when scoping projects and developing proposals
- Other duties, as assigned

Required Qualifications

- Minimum of seven (7) years of information security consulting, or related services, with a strong technical background
- Bachelor's degree in Computer Science, Engineering, or a related discipline
- Strong experience in enterprise risk management, security policies and controls, and information security strategy and architecture
- Background in control assessment, as well as technical systems, environments, and processes
- Desire and dedication to pursue relevant professional designations
- Demonstrable ability to ensure that deliverables meet work plan specifications and deadlines
- Proven ability to manage projects and teams
- Experience communicating with management and executives
- Outstanding organizational skills
- Excellent facilitation and negotiation skills
- Excellent verbal and written communication skills
- Ability to work to demanding deadlines
- Ability to multi-task and manage time efficiently
- High level of motivation to achieve superior results
- Proven ability to prioritize tasks effectively, with attention to detail
- Be a team player who can work effectively in all required situations

Travel may be required.

Qualified candidates are invited to forward their resume, with references and a covering letter via email to: careers@securis.com

Only candidates being considered for the role will be contacted.

All candidates will be required to complete security clearance and background checks.

Candidates under consideration may be required to complete a written knowledge examination prior to an interview.
