

Securis, an international information assurance company headquartered in Canada, provides clients with security and risk management consulting services, managed security services, security solution integration, and education services. Securis also maintains an active research and development portfolio, working collaboratively with organizations across Canada and internationally. Through our commitment to quality, research, and knowledge transfer, Securis delivers innovative and comprehensive information assurance services and solutions that provide value to our clients.

A challenging opportunity is currently available at Securis:

Information Security Architect (#2011-0018)

Summary

As part of the Professional Services team, the Information Security Architect assists in solving complex security problems by developing solution architectures for our clients and conducting in-depth evaluation of information systems and security management architectures. The ideal candidate has several years of experience with all technology layers (such as network, platform, and application) when assessing/designing security control implementations.

Key Responsibilities

- Plan and conduct information security consulting engagements including technical assessments, strategy development, and security architecture
- Perform risk assessments including detailed component/asset analysis and associated threat and vulnerability profiling
- Work directly with customers on the development of work plans and execution of consulting engagements
- Engage clients to perform assessments, through interviews, surveys, and data collection
- Develop deliverables, in accordance with work plans developed collaboratively with customers
- Develop useable, well-written, and well-structured deliverables for both client and internal audiences
- Contribute to ongoing development of knowledge and practices within Securis, to enhance services delivered to our customers
- Engage in ongoing professional development activities focused on information security, including the pursuit of designations such as CISSP, CCNA, CCDA, and CISM
- Various other duties as assigned

Required Qualifications

- Minimum of 5 years of information security architecture and/or related services consulting, with strong technical skills across one or more of the typical technology layers
- Strong experience with controls and information security strategy and architecture
- Background in control assessment, technical systems and environments, and processes
- Desire and dedication to pursue relevant professional designations if not yet obtained
- Demonstrated ability to ensure that deliverables meet work plan specifications and deadlines
- Excellent organizational skills
- Excellent verbal and written communication skills
- Ability to work to tight deadlines
- Ability to multitask and manage time efficiently
- High level of motivation to achieve superior results
- Proven ability to prioritize tasks effectively with attention to detail
- A team player who can work effectively in varied situations according to requirements
- Ability to travel (up to 20%)
- Ability to obtain Government of Canada clearance

Qualifications Considered an Asset

- Bachelor's degree in Computer Science, Engineering, or a related field
- Experience with TRA1
- Experience working in large enterprises
- Experience with exploiting vulnerabilities
- Active in the white hat community

Qualified candidates are invited to forward their resume, with references and a covering letter via email to: careers@seccuris.com

Only candidates being considered for the role will be contacted.

All candidates will be required to complete security clearance and background checks.

Candidates under consideration may be required to complete a written knowledge examination prior to an interview.
